Senior student major in CS at NYCU

ABOUT ME

I'm a undergraduated student who interested in image processing and computer vision, currently working on a 3DGS project (FishSpecimen) in computer vision, advised by Prof. Yu-Lun Liu.

SKILLS

- C/C++
- Python
- SQL
- Arduino
- Godot
- LabVIEW
- Html, Css
- JavaScript
- PHP

EDUCATION

[2022/09 ~ Current]

Overall GPA : 4.24/4.30

Department Ranking: **7/237 (2.95%)**

B.S., National Yang Ming Chiao Tung University,
Hsinchu, Taiwan. - Department of Computer Science

EXPERIENCES

[2025/07 ~ 2025/08]

Summer Intern in Chunghwa Telecom Laboratories

I conducted research on local image editing techniques, with a focus on rare scenes such as car accidents. I also developed a semi-automated labeling workflow using the Gemini API for video localization and collected datasets on elder behavior.

[2025/02 ~ 2025/06]

Teaching Assistant in Intro. to Artificial Intelligence

I was in charge of developing a homework assignment related to generative AI. I referred to the classic papers on DDPM and DDIM, as well as the latest paper on Visual Anagrams, to design the overall architecture.

[2024/02 ~ Current]

Member in CPLab at NYCU

As a member of CPLab, I completed specialized computer vision training (CS194-26) and presented at two paper sharing meetings. My work also included contributing to group projects such as YearGuessr and FishSpecimen.

AWARDS

[2025/10]

**Academic
Achievement
Award**
in 2024 Spring
(Top 5%)

[2025/07]

**Honorable
Mention**
in NYCU CS
Capstone
Competition

[2024/10]

**Academic
Achievement
Award**
in 2023 Spring
(Top 5%)

[2024/09]

**Course
Award**
of Computer
Organization
(Top 5%)

[2024/06]

**Best
Presentation**
in NYCU 2024 AI
Workshop

Beyond Memorization: A Multi-Modal Ordinal Regression Benchmark to Expose Popularity Bias in Vision-Language Models

Li-Zhong Szu-Tu*, Ting-Lin Wu*, Chia-Jui Chang, He Syu, Yu-Lun Liu

[Paper](#) | [GitHub](#) | [Dataset](#) | [Project Page](#)

YearGuessr introduces a global, multi-century dataset of building ages. We propose YearCLIP and benchmark over 30 other models, ultimately highlighting the popularity bias of VLMs in this task.

In this project, I was responsible for dataset collection, data analysis, proposing the YearCLIP model, and discovering the popularity bias insight.

Meanwhile, a simplified version “YearGuessr: A Worldwide Building Age Benchmark with 55k Wikipedia Images and Ordinal Targets” was accepted as an **Oral Presentation** at [ICCVW'25 DataCV](#). The advanced version was submitted to NeurIPS DB Track, where it received **scores of 4, 5, 5, 5** (borderline accept * 1 + accept * 3) after the rebuttal, despite being ultimately rejected.

PROJECTS

[2025/09 ~ Current]

FishSpecimen - Collab, AI, CV, 3D Vision, Python

The goal of this project is to reconstruct 3D objects inside a formalin container, focusing on correcting for light refraction. We're currently building a dataset in Blender and researching papers like ReNeuS (CVPR'23) and 3DGUT (CVPR'25).

[2025/09 ~ 2025/12]

CounterFlow - Collab, AI, CV, Video, Python

To reverse subjects in dynamic scenes with depth awareness and overall harmonization, we developed a three-stage pipeline integrating SAM3, ProPainter, and Wan2.2. I'm responsible for data curation, inpainting method, and fidelity assessments (FVD, PSNR).

[2025/09 ~ 2025/12]

Desktop Organizer - Collab, AI, HCI, Web, React

Developed a rule-based desktop organization web app featuring additional AI-driven capabilities. I'm in charge of core backend algorithms for multi-attribute sorting and automated tag partitioning.

[2025/01 ~ 2025/02]

Intro2AI Lab5 Diffusion - Myself, AI, CV, Python

As a teaching assistant, I designed a diffusion model lab where students perform denoising (forward and backward), visualize the process, optimize performance (via FID and AFD), and generate optical illusion images.

[2024/05 ~ 2024/06]

Built Year Prediction - Collab, AI, CV, Python

In this project, we used a CNN architecture and a self-collected dataset for training and inference. I implemented image processing techniques (Canny edge detection, auto-cropping, histogram equalization...), transfer learning, and Grad-CAM.
(I was also a presenter of this and won the corresponding award.)
